

PayBill

PayBill is the ideal solution if you want to offer customers the option of online payments with every invoice they receive. It's a fast and simple solution without the delay and additional costs associated with web development.

PayBill is really a best-of-both-worlds solution. It seamlessly combines the e-Commerce functionality of PayWeb with the direct action of point of sale, allowing every invoice you send to be paid there and then.

Benefits of PayBill

- ◆ Simple and Secure
- ◆ Easy to use
- ◆ Supports multiple African payment methods
- ◆ Supports 3D Secure authentication
- ◆ No development required
- ◆ Instant payment acceptance
- ◆ Customisable to suit your look and feel
- ◆ Send and get paid with PayBills 24/7

How PayBill works

PayBill offers merchants a way to get paid without an integration. Using PayBill a merchant creates a bill for their customer via a page in the African Payment Solutions Back Office admin website. On this page they would enter the customer's name, email address and the amount owed. The African Payment Solutions system would then send an email to the customer's email address. This email contains a link to a secure payments page. When the customer clicks the link they are taken to the secure payments page where they can complete the payment. The merchant is notified when a payment is completed and can check which PayBills have been paid using the African Payment Solutions Back Office.

PayBill is compatible with the following available payment methods

- ✔ Credit Card
- ✔ Debit Card
- ✔ M-Pesa (Kenya Only)
