- ◆ Easy to use
- ◆ Comprehensive documentation and sample code available
- ◆ Customisable to suit your look and feel
- ◆ Fully functional test environment for pre-production configuration and testing
- ◆ With PayWeb you are open for business 24/7

How PayWeb works

PayWeb is a secure and user friendly way to receive payments online. When the website customer wants to make a payment, the merchant's website redirects the customer to a secure payments page hosted by African Payment Solutions. On this page the customer will complete their payment and once this is done they will be redirected back to a page on the merchant's website and the transaction results will be posted to this page so the merchant knows the transaction status in real time. The PayWeb page is customisable so that it can be made to look more like the merchant's own website.

PayWeb is compatible with the following payment methods

- ✔ Credit Card
- ✔ Debit Card
- ✔ M-Pesa (Kenya Only)
- ✔ Verve (Nigeria Only)

We are adding payment methods all the time so please contact us if you are looking for a payment method that is not here or that we can get for you
